Luggage Racks

Functional Solutions for Comfort,
Design and System Integration

Luggage Racks – Custom System Solutions for Functional Rail Interiors

SBF designs and manufactures luggage racks according to customer specifications. Shape, length, and functionality are precisely adapted to the vehicle interior. The integration of additional systems is foreseen and can be implemented on request. The construction follows a consistent system concept that ensures technical and design coordination with other interior components.

Integration Options

The luggage racks provide versatile interfaces for the integration of additional functions:

- Lighting
- Passenger information systems – e.g. reservation displays, loudspeakers
- Vehicle information systems – e.g. camera, sensors, temperature detection

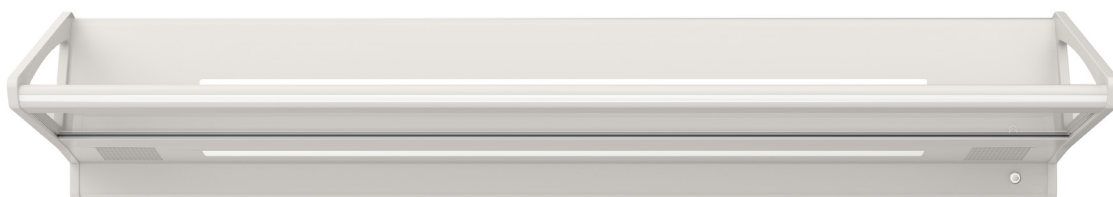

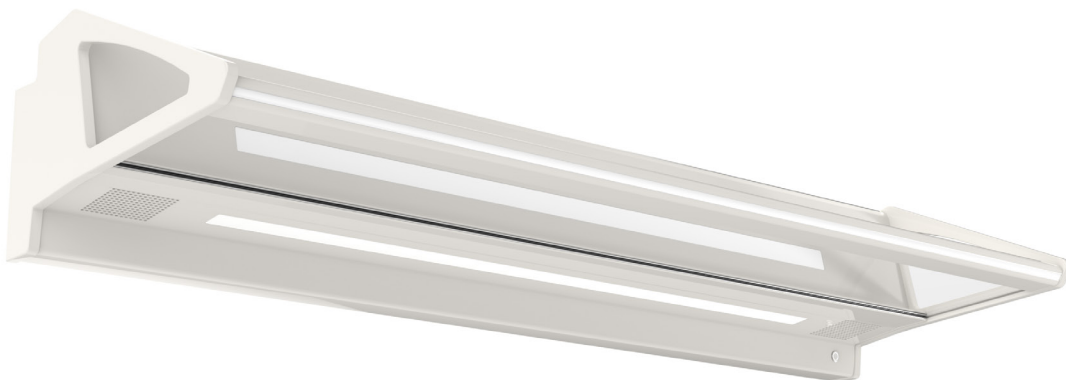

Lighting Options

Various lighting solutions are available, including:

- Direct or indirect lighting, selectable in warm white, neutral white, cool white, or tunable RGB
- Illuminated glass panels
- Reading lights

Key Advantages

- Development and production by SBF – from a single source
- System concept as the basis for technical and functional integration
- Components in compliance with relevant safety standards EN45545, EN50155, EN50121 and EN61373

Luggage rack made of aluminium with illuminated glass panel and main lighting – options include direct, indirect, tunable RGB, or reading lights.

**We realize your requirements –
efficient, functional, precise.**
