Handrails and Partitions

Custom Solutions for Enhanced Safety and Comfort in Passenger Areas

Partitions and Handrails – Custom Solutions for Enhanced Safety and Comfort in Passenger Areas

SBF designs and manufactures handrails and partitions, including doors, precisely tailored to the requirements of modern vehicle interiors. Our solutions combine high functionality, flexible design, and strict safety standards (EN45545) – all from in-house production. This enables individual, modular systems that integrate seamlessly into existing vehicle concepts while allowing for future extensions.

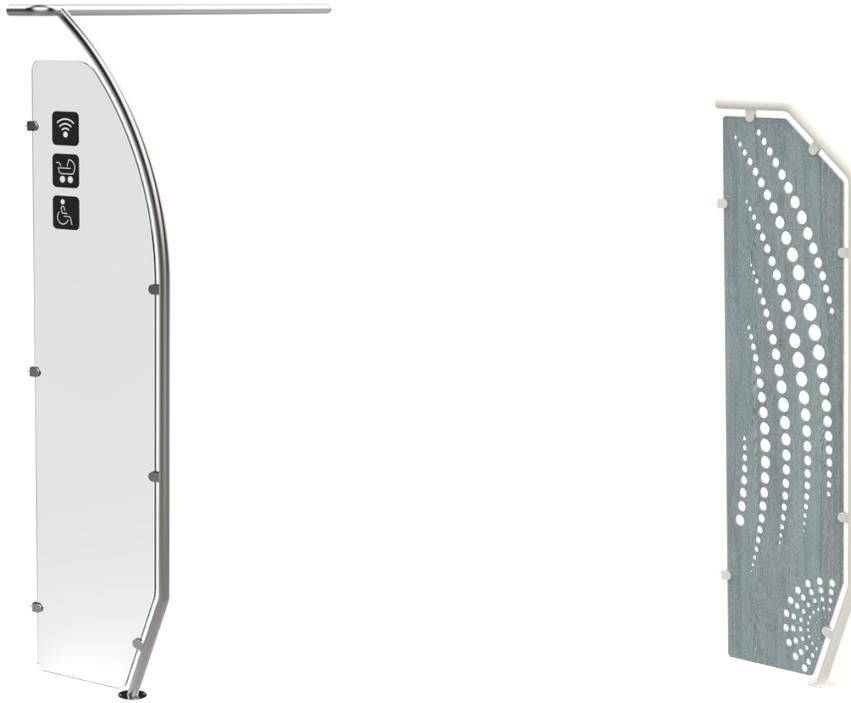

Technical Advantages

- **In-house production:** All components are developed and manufactured internally, ensuring the highest quality and safety standards.
- **Flexible design:** Mechanical and visual options are freely selectable, allowing each solution to be precisely adapted to the respective installation situation.
- **Modular system design:** The integrated concept allows seamless connection of additional functions and systems, enabling future extensions within the vehicle interior.
- **Standards compliant:** All components are designed in accordance with the required safety standards EN45545, EN50155, EN50121 and EN61373.

Technical Details and Materials

The offered solutions are available in various materials – including steel and stainless steel (plain or coated), glass, wood, and composite materials. In addition, we provide integration options such as lighting (direct, indirect, RGB, reading lights), push buttons, and advertising surfaces. These options allow for customized interior designs that are both functional and visually appealing.

Further technical specifications and individual configurations can be discussed in a personal consultation.

Partition solution for the entrance area with integrated handrail

Floor and wall-mounted, infill optionally made of laminated glass or wood composite material.

Partition door with glass infill

Glass surface can be customized, e.g. with foil, frosting, or printing.

We realize your requirements – efficient, functional, precise.
